# **LIVE** quality control inspections in China

The majority of quality control companies perform inspections according to the AQL standard (Acceptance Quality Level). It is used to determine how many units should be inspected and how many defects are acceptable during the inspection.

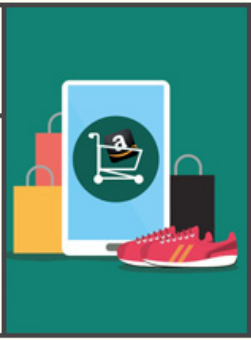

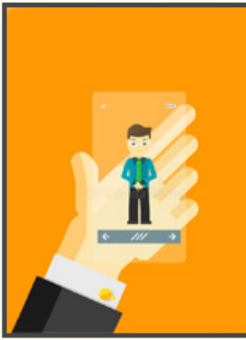

The AQL standard was created in 1930s. Since then production technologies and legal regulations have evolved greatly. The AQL method has lost a lot of its effectiveness and may be considered outdated in the present conditions. Nevertheless, it is still used by the majority of Quality Control companies, especially in China.

This method gives you only a general idea of the product quality: there is no way to go into details or get any additional information about the production technology or the product itself.

**We provide all quality control inspections in LIVE mode. This method is specifically designed to meet the demands of E-commerce entrepreneurs and Amazon sellers.**

# LIVE INSPECTION

Trust your own eyes instead of a PDF report

**LIVE**

**PDF**

**VS**

**ATTENTION  
TO DETAILS**

Opportunity to examine the product from any angle and assess the seriousness of defects.

You get only a general idea about the product quality, with no possibility of further examination.

**COMMUNICATION**

You can communicate with the inspector and get answers to all your questions concerning the product, discuss the discovered defects and the ways to elimi-

Limited information about the product based only on the data from the inspection report.

LIVE inspection gives you complete information about the quality and characteristics of the product in Real Time.

---

Communication with the inspector and the supplier allows you to fix most of the problems with the defects on

## IMMEDIATE RESPONSE

Inability to fix any problem with your goods during the inspection. Negotiations with the supplier are possible only after you get the inspection

Respond quickly to any potential problems with your shipment from anywhere in the world. Direct communication with the supplier allows to you to fix defects during the inspection and avoid them in future orders.

LIVE inspections save your time and speed up the delivery of your goods to Amazon warehouses.

---

Our inspector is your representative, who will negotiate all the details with the supplier and find the best possible solution to any problem with your

## ROLE OF THE INSPECTOR

The necessity to trust the local inspector without any possibility to communicate with him.

A European inspector is perceived as a counterpart of the client by the supplier. It greatly facilitates negotiations, resulting in prompt and effective solutions for any situation.

---

Our European inspectors evaluate the product from the buyer's perspective and ensure that its quality fully meets the client's expectations.

## NEW PRODUCT LAUNCH

The necessity to rely only on the inspection report, made by the local inspector with no perspective on how the product will be received by

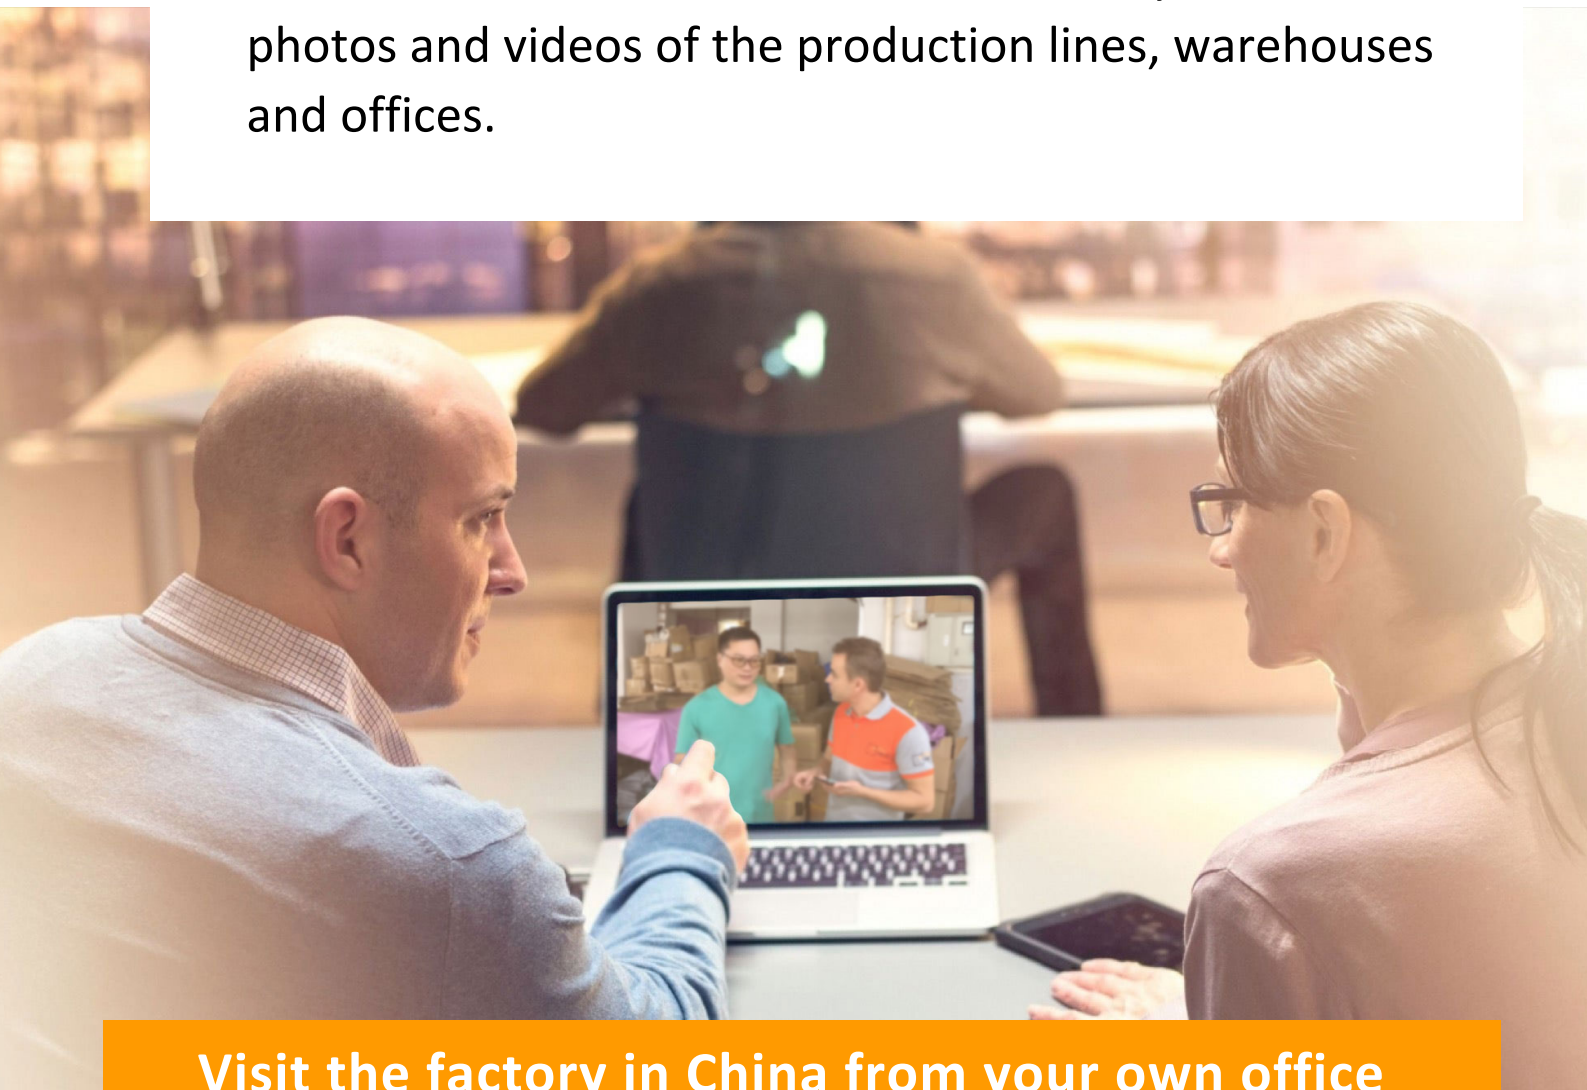

Our approach allows us not just find the defects, but foresee them before they arise

---

## The Tech

- You will be able to communicate with the inspector via a messenger application and receive photos and videos showing the appearance, functionality and packaging of the goods in real time.
- You can either take full control over the inspection, or join in only when your presence is needed to make some key decisions concerning the product.
- In case you work with this supplier for the first time and would like to know more about the factory, we shoot photos and videos of the production lines, warehouses and offices.

**Visit the factory in China from your own office**

## **Interact with a professional inspector, don't read a boring report**

---

### **Communication**

The main advantage of the LIVE mode is the communication between the client and the supplier during the inspection. Our inspectors have all the necessary experience and skills to make it possible.

---

### **Interaction**

All your requirements will be made clear to the supplier. You will also get a clear understanding of the manufacturer's capabilities for making a balanced decision about the possibilities of future cooperation.

## The inspection price depends on the region

Our inspection network covers all major production regions in China. Nevertheless, some factories may be located in such a remote area, that the trip there turns into a challenging and time-consuming quest.

The prices for any region are available on our website.

# From \$170

## All inspections are controlled by supervisors

The role of our supervisors is to provide solutions for any complicated situation during the inspection.

Their experience in working with the local suppliers makes our inspections even more efficient.

## Our inspection algorithm is designed to meet the demands of Amazon FBA sellers

Shipments are examined for full compliance with Amazon FBA standards - the presence of all the necessary labels, barcodes, dimensions, weight and quality of the cartons.

**We bring U  
to the qUality**
